Abstract

Summarise the problem, your approach and the main result in a few sentences.

1 Introduction

Write your introduction here. To cite a source, add it to refs.bib and use its key, for example [1]. Section 2 describes the method.

2 Method

Inline maths goes between dollar signs, like $E = mc^2$. A numbered equation uses the equation environment:

$$S_n = \sum_{i=1}^{n} i = \frac{n(n+1)}{2} \tag{1}$$

Refer to it as Equation (1).

3 Results

Figure 1 and Table 1 show how to refer to floats by their label.

4 Conclusion

Close with what the results mean and what comes next.

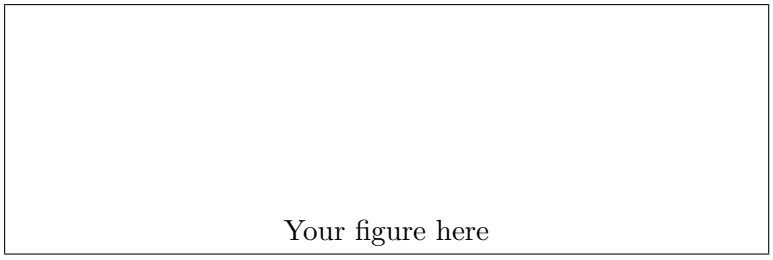

Figure 1: Describe what the figure shows.

Method	Accuracy	Time (s)
Baseline	0.81	12
Ours	0.87	9

Table 1: A small results table.
